Mayorgetal structure and solution fluorescence characterization of Mg.2'(3')-0-(N-methylanthraniloy!) nucleotides bound to the Dictyostelium missoideum myosin motor domain.";
J. Mol. Biol. 274:394407(1997).
I- FUNCTION: Myosin is a protein that binds to actin and has ATPase activity that is activated by actin.
I- SUBUNIT: Myosin II heavy chain is two-headed. It self-assembles into filaments. Hexamer of 2 heavy chain subunits (MHC), 2 alkali light chain subunits (MLC) and 2 regulatory light chain subunits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- SUBCELLULAR LOCATION: HIGHEST CONCENTRATION IN THE POSTERIOR CELL

; Sequence 31, Application US/08082849B
; Patent No. 567274
; GENERAL INFORMATION:
APPLICANT: Leppla, Stephen H.
APPLICANT: Klimpel, Kurt R.
APPLICANT: Arora, Naveen
APPLICANT: Nichols, Peter U.
TITLE OF INVENTION: Authrax Toxin Fusion Proteins and
TITLE OF INVENTION: Related Methods
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ||||||

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention provides a recombinant DNA construct that comprises a vector and at least one nucleic acid (or its fragment) encoding a combination of Bacillua archracis proteins, selected from protective antigen (PA), MAT-PA (PA with its secretory signals removed), TPA-PA (PA with its secretory signals removed), TPA-PA (PA with its secretory signals replaced with those of tissue plasminogen activator) and PAG3 (63 MDa PA). The construct is useful as a DNA vaccine for anthrax and in producing infectious alpha virus particles. These particles, expressing the B. anthracis proteins are useful also as vaccines for anthrax. Host cells transformed with the construct are useful for analyzing the effectiveness of drugs and agents that inhibit anthracis MAT-PA proteins. The present sequence represents a B. anthracis MAT-PA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QSAIWSGFIKVKKSDEYTFATSADNHVTMWVDDQEVINKASNSNKIRLEKGRLYQIKIQY 121

```
The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS184-AAMS1500), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS213 and AAMS1801), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9

Protecting humans against anthrax using mutant B groups (anthrax protective antigens) of the pore-forming binary A-B toxin of Bacillus anthracis.	RESULT 12 AAM51488 ID AAM51488 standard; protein; 735 AA.
Disclosure, Fig 13, 77pp, English.	AC AAMS1488;
e invention relates to antibacterial agents comprising mutant forms of re-forming toxins (AAM52113 and AAM51484-AAM51500), especially mutants the B moiety of the pore-forming binary A-B anthrax foxing where the B	DT 01-FEB-2002 (first entry) XX DE Anthray Da mintant D40sa
moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. The present sequence is that of the	ax, Prety; P
anthrax PA protein	XX OS Bacillus anthracis.

```
The sequence encoding the protective antigen of Bacillus anthracis may be used in the construction of a nucleic acid which encodes a fusion protein comprising the anthrax protective antigen binding domain of the native anthrax lethal factor and a sequence encoding an activity inducing domain of a second protein. The fusion proteins are useful for the specific filling of tumour cells or the killing of cells infected with intracellular pathogens, especially HIV. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                  Mucleic acid encoding anthrax toxin fusion protein - useful for targetting toxin to specific cells, eg for killing tumour cells or HIV-infected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QRENPTEKGLDFKLYWTDSQNKKEVISSDNLQLPELKQKSSNSRKKRSTSAGPTVPDRDN

```
The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS113 and AAMS1800), especially mutants in the B.moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Anthrax; PA; protective antigen; antibacterial; pore-forming toxin; B moiety; A-B anthrax toxin; Bacillus anthracis; vaccine; mutant; mutein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAM53113 and AAM51484-AAM5150), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483)

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS213 and AAMS1800), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vacines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           QRENPTEKGLDFKLYWTDSQNKKEVISSDNLQLPELKQKSSNSRKKRSTSAGPTVPDRDN 180

The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAM5113 and AAM51464-AAM510), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the B moiety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAM51483) ithrax; PA; protective antigen; antibacterial; pore-forming toxin; moiety; A-B anthrax toxin; Bacillus anthracis; vaccine; mutant; mutein. Protecting humans against anthrax using mutant B groups (anthrax protective antigens) of the pore-forming binary A-B toxin of Bacillus anthracis. /note= "Wild-type Asp substituted by Lys" Mey Location/Qualifiers Misc-difference 425 04-MAY-2001; 2001WO-US014372 04-MAY-2000; 2000US-0201800P Claim 4; Page; 77pp; English Sellman BR; (HARD) HARVARD COLLEGE WPI; 2002-017725/02 anthracis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1464-AAMS150), especially mutants in the B molety of the pore-forming binary A-B anthrax toxin, where the B molety is anthrax protective antigen (PA) and using these mutants or compositions of them for protecting against Bacillus anthracis infections in humans, especially as vaccines. Note: The present sequence is not given in the specification but is derived from the Bacillus anthracis wild-type PA protein sequence shown in figure 13 (AAMS1483)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

Anthrax, PA, protective antigen; antibacterial; pore-forming toxin; B moiety; A-B anthrax toxin; Bacillus anthracis; vaccine; mutant; mutein. The invention relates to antibacterial agents comprising mutant forms of pore-forming toxins (AAMS2113 and AAMS1484-AAMS1850), especially mutants in the B moiety of the pore-forming binary A-B anthrax toxin, where the moiety is anthrax protective antigen (PA) and using these mutants or Protecting humans against anthrax using mutant B groups (anthrax protective antigens) of the pore-forming binary A-B toxin of Bacillus anthracis. /note= "Wild-type Asp substituted by Lys" Misc-difference 427 Ala" /note= "Wild-type Lys substituted by Asp" /note= "Wild-type Phe substituted by Location/Qualifiers Misc-difference 397 Anthrax PA mutant K397D/D425K/F427A.
